

Bladder tank used for fire protection

Background

Packaging manufacturer that needed a fire protection system. The size required was 120,000L and the tank had to be resistant, movable and durable.

Approach

Bladder tank with required inlet and outlet installed within two weeks. The company only had to provide a flat and horizontal ground for the tank to be installed.

Result

The tank was then filled and ready to be used in case of an emergency. Thanks to this solution, the company complies with safety and fire protection obligations.

Benefit

Client's needs met in no time. Quality of service from order up till installation and filling of the flexible tank. Plus client can rely on a 15 year guarantee.
