

BLADDER
TANKS

BLADDER TANK

“THE VERSITILE LIQUID STORAGE SOLUTION”

The **versatile tank** that can accommodate **all types of liquids** (water, drinking water, wastewater, fuels/hydrocarbons, chemicals, effluents).

THE BLADDER TANK SOLUTION

Easy transportable and commissioned liquid storage is limited – there’s no doubt about it. RWTS’s bladder tanks provide a reliable easy transportable and commissioned liquid storage solution that adapts for all short or long temporary needs.

Bladder tanks are made of **high density and resistance woven Polyester (PES)** with a reinforced PVC or Polyurethane coating layer for **durability and strength**.

Liquids stored safely and fully enclosed in the bladder tank, limited air exposure keeping liquids free from risks of oxidation, condensation or evaporation. Furthermore, unlike steel tanks, bladder tanks will not rust or corrode. Bladder tanks are constructed to ensure sturdiness and longevity in your investment.

Can be **easily folded and transported by truck** to regional or remote locations

Minimal site preparation and can be installed on compacted ground. **No concrete needed**

Easily unfolded and installed in hours on your site

Tried, tested and trusted liquid storage technology

VARIOUS INDUSTRIES APPLICATIONS

As the *Streamlined Waste Water and Water Specialists*, we are committed to developing solutions that can be seamlessly transported and commissioned. As leaders in remote waste water and water treatment, we understand the challenges of regional projects, where infrastructure is often limited, and have a proven track record of overcoming adversity.

The bladder tanks are extremely versatile and accommodate many forms of liquids and the needs of various industries:

EMERGENCY SITUATIONS / DEFENCE

- Water, fuels or chemicals storage for emergency operations
- Temporary pollution and spills containment (oil, chemicals...)
- All type of liquids storage for Defence forces

MINING / INDUSTRY

- Temporary / long temporary water storage at remote locations (mining camps...)
- Liquid food, oils or powders storage in the food production industry
- Temporary storage of chemicals or hazardous liquids during industrial maintenance operations

CONSTRUCTION

- Water storage for dust suppression of construction sites
- Rainwater collection, water and wastewater storage on construction sites

AGRICULTURE

- Storage of effluent, fertilizers and other liquids
- All year portable water solutions, security water storage during drought periods

FIRE PROTECTION

- Storage of water for fire protection on construction, industrial or remote sites

WATER AND WASTEWATER

- Potable water storage
- Wastewater and sewage storage for wastewater treatment

KEY FEATURES

- Self-supporting, collapsible, easy to transport and install on a compacted ground
- High frequency welded, anti UV treatment on both sides
- Comprehensive range of fabrics/bladder tanks to accommodate and store all types of liquids
- High resistance tested and approved to break, tear, crack, temperature or water proofness
- Full range of quality fittings, inlet and outlet available

BUILD A BLADDER TANK FARM

For a flexible water or liquids storage solution we have varied bladder tank sizes to suit the needs of every project. Furthermore bladder tanks can easily be interconnected to form a bladder tank farm should your needs grow over time, thus offering you a flexible, scalable and cost effective solution.
